DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-25 and 44 drawn to a method of covalently joining a DNA strand to an RNA strand and a DNA-RNA molecule and the DNA-RNA molecule, classified in class 702, subclass 19.
 - II. Claims 26-43, drawn to a method of tagging a 5' end of a DNA-RNA molecule, classified in class 702, subclass 19.
 - III. Claims 45-79, drawn to a method of obtaining full-length gene sequences, classified in class 702, subclass 19.

Groups I and II are distinct because Group I adds to the topoisomerase-DNA intermediate an acceptor RNA strand complementary to the 5' single-strand tail under conditions permitting a ligation. An RNA acceptor strand is involved in the ligation. The method of Group I results in covalently joining the DNA strand to the RNA strand. Group II however adds to the topoisomerase-DNA intermediate a 5'-hydroxyl terminated RNA molecule complementary to the 5' single-strand tail under conditions permitting a ligation. An RNA molecule is involved in the ligation not just an acceptor strand as in Group I. The method of Group II results in the formation of a 5' end tagged DNA-RNA ligation product.

Art Unit: 1631

Group III is distinct from Groups I and II because Group III is a method of obtaining a full length gene sequence. Group III involves synthesizing cDNA using a tagged mRNA template. Groups I and II are not directed to synthesizing cDNA.

For the reasons described, Group I, II and III are directed to different inventions which would cause an undue search burden if they were searched together.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the

117 CONT. Of Marrison. 107000, 11

Art Unit: 1631

record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anna Skibinsky whose telephone number is (571) 272-4373. The examiner can normally be reached on 8 am - 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ardin Marschel can be reached on (571) 272-0718. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
